Higher Education IT Talent

OMT Consultants assists colleges and universities improve information management by recruiting top talent needed to install and maintain higher education administrative information systems.

We provide:

- Contract – full-time or part-time, onsite and remote
- Permanent and contract-to-permanent placement
- Capabilities include: Banner, Colleague, PeopleSoft, Jenzabar, Campus Management, Workday, Campus Café
- Disciplines include: DBA, Student, Finance, HR, Procurement, Advancement, Payroll, Reporting, Business Intelligence

OMT Consultants assists higher education institutions manage student information from initial recruitment, through all educational and alumni activities. Our consultants enable the integration of the student information ERP system with financial, human resources, customer relationship management and enterprise reporting systems. They work across all administrative functions to enhance and streamline business processes, and train staff on software usage. They maintain the database management system, enabling institutional data to be secure, accurate, timely and readily accessible by all stakeholders.

Our ERP Consultants:

- Are skilled in all phases of the ERP life cycle from requirements definition through post implementation support
- Are skilled in ERP data management, integration, reporting, extracting, and security provisioning
- Have all software skills necessary to implement and maintain all currently installed higher education ERPs
- Have a strong understanding of higher education business processes and are passionate about the mission of higher education
- Have high professional work ethics, strong discipline, and strong interpersonal skills necessary to work on-site or remote for part-time or full-time durations

While placing ERP support resources is our specialty, we also place resources needed to support academic computing needs including LMS software support and instructional designers. Additionally we can provide resources needed to manage and maintain the IT infrastructure including managers, system engineers/administrators, storage engineers/administrators, as well as network engineers and help desk resources.
